Abstract (en)

The device comprises a body with a handle (11) and a first roller (1) designed to peel off a layer of wax (3) from the skin (4). A second roller (5) holds the skin down as the instrument is moved over it. The first roller has a cam catch (2) to grip the end of the wax layer. Both rollers can be motor driven. The skin retaining roller is rotated at a higher speed than the main roller. The first roller measures some 4 cm in diameter and the skin retaining roller 2 cm. The whole instrument measures about 8 x 8 x 8 cm. In variants of the design the instrument can incorporate a heater and a counter roller to grip the wax layer.

Abstract (fr)

L'invention concerne un appareil pour l'épilation humaine comprenant des moyens d'arrachage destinés à l'enlèvement d'une bande (3) épilatoire préalablement déposée sur la peau (4) de l'utilisatrice. Conformément à l'invention, on utilise des moyens de maintien de la peau (4) et des moyens de préhension manuels <IMAGE>
