Abstract (en)

The printing machine has a stereotype (11) which is able to move relative to a support (12) carrying the article (13) to be printed. A leaf (14) of material is placed between them to produce the appropriate impression. The stereotype is curved and fitted to a support block (15) which rocks on an applicator head (16). The support block and applicator head are separated by guides (24) with curved apertures (26) and rollers (28) which interact with them. Additionally, the support block is connected via an arm (33) to a two-way power cylinder (34) pivoted to the applicator head, and is equipped with a heating sole plate (20).

Abstract (fr)

Il s'agit d'une machine à imprimer du genre comportant, à la manière d'une presse à dorer, un cliché (11) monté mobile par rapport à un support porte-objet (12), pour l'application à l'objet (13) à imprimer d'une feuille (14) propre à l'impression recherchée. Suivant l'invention, le cliché (11) est cintré au contact d'un bloc de support (15) monté basculant sur une tête d'application (16) elle-même montée mobile par rapport au support porte-objet (12) transversalement par rapport à celui-ci. Application, notamment, à l'impression d'objets plats. <IMAGE>
