Abstract (en)

A sheet printing machine having a centrally located printing mechanism (13) is described. A conveying device (12) is located upstream and a delivering device (14) is located downstream of the printing mechanism (13). A slidable cover (16) alternatively covers or exposes the conveying device (12). Another cover (17) alternatively covers or exposes the delivering device (14). Each cover is made of a larger section and a smaller section being designed to slide within the larger section. <IMAGE>
