Abstract (en)
[origin: EP0738668A1] The aerosol operating device includes a handgrip (1) which has a coupling device (3) in its end (2) for the container (13), and a hand-operated trigger (5) in its endface (4), acting with a valve device on the container. There is a recess in the end of the handgrip, in the vicinity of the coupling device, extending into the endface of the handgrip. The part of the recess extending into the endface of the handgrip serves as a receiver for the trigger. The recess may extend over the end zone including the coupling device and into the handgrip, which has a bulge (9) below the coupling device.
