Abstract (en)
[origin: EP0738972A1] In a fault information notification system for notifying a manager unit of faults detected by a server unit on a network system in which a plurality of server units and the manager unit which manages the server units are connected in a network, each server unit comprises a fault information producing unit for producing fault information for various faults detected by the server unit to which sequence numbers are assigned, a fault recording unit for recording respective information in an extractable data structure for each fault information, and a fault history search unit for searching corresponding fault history information from the fault recording unit in response to a fault history search request including the reference numbers from the manager unit. <IMAGE>
