Abstract (en)
[origin: WO9515359A1] A vulcanizable fluoroelastomer composition having excellent extrusion properties is provided which comprises (A) a bromine-containing fluoroelastomer having a multi-modal molecular weight distribution, an intrinsic viscosity of 40 to 200 mL/g, and an Mw/Mn ratio of 3-25 wherein the fluoroelastomer has interpolymers of vinylidene fluoride, hexafluoropropylene, and optionally tetrafluoroethylene; (B) a polyol or polyamine vulcanizing agent; (C) an organic peroxide; and (D) a polyfunctional unsaturated compound.
