Abstract (en)

[origin: US5718175A] The present invention relates to a method and apparatus for mounting a printing plate on a printing unit cylinder's surface, the printing unit cylinder having an open passage in a retaining area of the printing unit cylinder. Within the open passage a lock-up bar is slidably mounted. The lock-up bar includes an element for retaining at least one edge of the printing plate. A tucking device assigned to the printing unit cylinder has a tucker bar substantially covering the retaining area of the printing plate.
