Abstract (en)

[origin: EP0739822A1] The system involves a device for carrying out a shaping stage or for introducing shaping components and comprises at least one press cushion or form matrix for introduction of the adhesion positions. It may also comprise a pair of folding or rolling tools (31). The sample bag, in addition to the closure seams (6, 6') has at least one additional adhesion position connecting the foil strips (1'). The bag has two opposing, rolled-in or folded-in edges. Double longitudinal seams (6') are incorporated, and between the individual seams at least one of the foils has a fold running parallel to the longitudinal seams.
