Abstract (en)

[origin: EP0739838A2] The drivable winding core (3) and an upper column part (4) of the winding frame connected to it on the face side and penetrating the rotary axis (8) of the winding core vertically is releasably fixed to the lower column part (13) connected to the winding frame foot (12). The upper column part has fixture sections (19, 20) of different lengths distributed on the rotary axis of the winding core. The free ends of the fixture sections of the upper column part are formed applicable to the lower column part of the winding frame. The upper and lower column parts are formed by two spaced apart, parallel support components which have a hollow cross-section.
