Abstract (en)
[origin: EP0739842A2] A clamp device (3) can be laid on the material (17) and also an air smoothing device, which after clamping of the material can be moved away from the clamping point. At least in the area of a stop (5) blower devices (6) are arranged for lateral blowing of air between the sheet layers. The stop is provided with holes for the air blown from the blower devices. A first movement device (10) moves the clamping device and the blower devices vertically to the table surface and a second movement device (9) moves the clamping device parallel to the table surface. The blower devices are integrated in the clamping device.
