Abstract (en)
[origin: EP0740007A2] A process for treating a textile substrate by (a) providing a mixing apparatus located in-line with a textile substrate contacting system, the apparatus having at least two inlet ports for receiving a predetermined amount of water and at least one raw textile finish component, a fluid port for combining the water and textile finish component into a single fluid stream, an interfacial surface generator in operative connection with the fluid port for statically mixing the water and raw textile finish component, and an outlet port connected to the interfacial surface generator for discharging a formulated textile finish composition, and (b) contacting a textile substrate with the textile finish composition.
