Abstract (en)

The fixing system consists of a first member (1) with a base (3) which is embedded in the thickness of the panel (P) and is equipped with a cage (3) projecting from the panel's face (F) at right angles to receive the second member (2) of the fixing. The second member (2) has a basic U-shape with apertures (15, 16) in its sides (5, 6) which clip into the cage when the two members are pushed together as the apertures engage with inward-projecting lugs (13, 14) in the cage. The cage on the first member of the fixing is made from four side walls, cut out and folded at 90 degrees to the base of the member, while the second member has a free edge (17) which is turned inwards and acts as a spring and reinforcing element.

Abstract (fr)

La présente invention concerne une attache de fixation d'un panneau sur un élément de structure quelconque. Cette attache se compose d'une première partie (1) formant embase (3) noyée dans l'épaisseur d'un panneau (P) et munie d'une cage (4) débouchant sur l'une (F) des faces du panneau, et d'une deuxième partie (2) en forme de U dont les branches (5, 6) peuvent être clippées dans la cage (4) orthogonalement au plan du panneau (P), de façon à permettre l'accrochage de ce panneau sur un élément de structure. Cette attache permet notamment la fixation de panneaux anti-bruit d'habillage de murs ou de façades. <IMAGE>
