Abstract (en)

[origin: EP0740119A2] A plate fin type heat exchanger (10) having open-ended passages (18) containing easyway or hardway finning (27,28) and alternating separate passages (20) is conditioned by introducing conditioning fluid into said open-ended passages (18). The conditioning fluid can be introduced at either end or intermediate the ends of said open-ended passages (18). The invention has particular application to downflow reboilers.
