Abstract (en)  
[origin: WO9520496A1] Described is a container (1) for a free-flowing product, in particular typographic correction fluid, the container having a tubular neck (2) with an application aperture with a valve closure for the controlled application of metered quantities of the fluid to a substrate. The aim of the invention is to ensure that the container remains, over an extended period, perfectly capable not only of applying spots of fluid precisely at a given point but also of applying the fluid over large areas. This aim is achieved by fitting the container with a second tubular neck (19) with a second aperture and fitted with a removable closure cap (20) with an integral applicator brush (23). Both tubular necks (2, 19) are disposed in the upper part of the container in such a way that the far end of the tubular neck (2) with the application aperture projects out beyond the cap (20) when the cap is in place over the second aperture.
