Abstract (en)

[origin: US5743460A] PCT No. PCT/FR95/00157 Sec. 371 Date Jul. 17, 1996 Sec. 102(e) Date Jul. 17, 1996 PCT Filed Feb. 10, 1995 PCT Pub. No. WO95/21778 PCT Pub. Date Aug. 17, 1995The wrapper primarily consists of a flexible thin film bag comprising two faces pleated parallel to the base, the pleats being secured to one another at their ends corresponding to the lateral edges of the bag. The opening of the bag is extended on the side of face by a flap. The opening of the bag is widened by partially unfolding the pleats of faces to form a container enclosing the object to be wrapped. The flap covers the object to be wrapped and its end is wedged between face and the object to be wrapped; then the user only has to pull on the ends, to partially reform the pleats about the object to be wrapped. The bag is useful as a wrapper for enclosing elongated objects such as long sandwiches.
