Abstract (en)
[origin: WO9520702A1] Clothes washing machine provided with an outer casing, a wash tub, a cylindrically shaped perforated drum housed in said wash tub and capable of rotating within said wash tub, said rotating drum being provided with a plurality of sealed hollow annular bodies that are integrally arranged in correspondence of the side walls of said cylindrical drum, and with a plurality of movable balancing weights that are capable of sliding freely within said hollow bodies, wherein said annular hollow bodies are shaped to show prominent lobes arranged regularly along the perimeter of said hollow bodies. At least one of the side walls of said drum is adjacent to a plurality of said hollow bodies, which are coaxially centered with the axis of the drum and have different radii so as to avoid any mutual interference.
