Abstract (en)
[origin: WO9519618A1] Device for selectively displaying advertizing information of the type comprising at least one chamber for storing rolls containing rolled advertizing posters, at least one display window for viewing the advertizing poster scrolled behind it, at least one unroller for selectively unrolling posters from the rolls behind the display window. The device is characterized in that it includes a self-supporting structure comprising two roll storage chambers arranged at its ends, behind the display window, level with the latter, so that said unroller can unroll the poster from a storage chamber behind the window simultaneously with rolling the poster of the other storage chamber which has just been displayed, and vice versa. The device of the invention is for use in displaying advertizing posters.
