Abstract (en)  
[origin: EP0741009A2] The flexoprinting machine has a print roller mounted at one end in the frame which is fitted with a support or plate (12). The plate has bearings for holding the shaft studs of the free ends of the printing and pattern rollers (2,3) or with sockets for the bearings (10,11) which are fitted on the studs. The plate can swivel between a folded-away position where the rollers (2,3) are freely accessible and a swivelled-in position where the shaft studs of the free ends of the rollers are mounted on the plate. The shaft studs or the bearings fitted on it, are held between a stop of the plate and a movable abutment which can be moved against same.
