Abstract (en)

[origin: EP0519301A1] In a printing machine cylinder (1), a vibration damping means is to be provided which has good damping properties and is inexpensive to produce. According to the invention, the printing machine cylinder is of integral construction and has a symmetrical or rotationally symmetrical core (7) extending in the axial direction inside said cylinder, the core and/or the core journals being completely or partially surrounded by vibration-damping material (19, 21). <IMAGE>
