Abstract (en)

[origin: EP0741021A1] The device has several holders (10) arranged next to each other and lockable with keyed engagement on the crossbar by locks (17,18). The holders are vertically guided in guides on the crossbar. They have recesses (16,17) to lock on pins (18). The holders can be locked on the crossbar by displacement parallel to the axis of the impression cylinder. A flexible small plate can be fixed on a side face of the cylinder to restrict the deflection of the holders.
