Abstract (en)  
Sealing joint between two panel building elements comprises a seal (9) made from a flexible and compressible polymer with a covering of a material that is non-combustible and/or which retains its integrity at high temps. at least one the surface which seals against an adjacent element.

Abstract (fr)  
L'invention a pour objet un joint (8, 9) d'étanchéité à base de polymère (9) flexible/compressible, notamment destiné à assurer l'étanchéité propre d'un élément de construction et/ou l'étanchéité entre deux éléments de construction adjacents, éléments du type panneaux (1) de paroi. Ledit joint (8, 9) est muni, au moins sur sa surface destinée à être mise au contact dudit élément, d'un revêtement (8) superficiel en un matériau non combustible et/ou gardant son intégrité à haute température. <IMAGE>
