Abstract (en)
[origin: EP0741226A2] Within the ventilation channel (4) is a closure device (5) for closing and opening the ventilation channel. The ventilation channel is incorporated in front of the middle seal (19) through the arch frame (1) and behind the middle seal between the two frames (1,2). In front of the outside mouth of the ventilation channel is arranged an outward hood-type cover profile, the entry aperture (20) of which is lower than the mouth of the ventilation channel. One ventilation can be provided in the upper area of the window and one in the lower area. The ventilation channel can be fitted in a rounded manner downwards within the side of the lower pane frame facing the room interior.
