Abstract (en)  
The connector device connects a hollow conductor (5) of a coaxial cable (1) with a conductor (14) of a coaxial connector. The device has a bellows type intermediate piece (25). This is in sprung connection with the conductor (5) of the coaxial cable (1) or with the conductor (14) of the coaxial connector (6). The bellows member (25) may be shortened by buckling and is connected at one end with the conductor. The bellows member is preferably spring biased in its compressed position. A contact part may be inserted in the hollow space of the coaxial cable inner conductor. The intermediate member is electrically connected to this contact part and seals it. The contact part may be fixedly connected to the inner conductor by an expanding member. The inner conductor may be fixedly connected to the intermediate bellows member.

Abstract (de)  
Die Vorrichtung dient zum elektrischen Verbinden eines Endes eines Leiters (5) eines Koaxialkabels (1) mit einem Leiter (14) eines Koaxialverbinders. Ein balgartiges Zwischenstück (25) liegt an seinem einen Ende stirnseitig und federnd am Leiter (5) des Koaxialkabels (1) und an seinem anderen Ende am Leiter (14) des Koaxialverbinders (6) an. Das Zwischenstück verhindert, dass Temperaturänderungen und mechanische Einwirkungen die Stabilität der Verbindung beeinträchtigen. <IMAGE>
