Abstract (en)
[origin: EP0741437A2] The lamp holder contains a holder body (14) of insulating material with an elongated shaft and a plate-shaped head with a through plug aperture for the lamp's contact pins and channels for accepting and devices for fixing two contacts with connected conductor ends for supplying voltage to the pins. Each channel has an insertion slot at least partially open to the outside of the holder body and a undercut lug (16) for shape-locked holding of a contact, so that the contact (15) can be clicked into its operating position, in which it is secure against pulling and pressing forces, from the side of the holder body. The connected conductor end (21) can be fixed onto a holder (27-29) formed on the holder body.
