Abstract (en)

[origin: EP0655217A1] The invention relates to an electric vacuum cleaner (1) having a container (8) for a dust bag (9) with a carrier plate (10), which chamber has a textile cover (14) on the outside and an openwork structure (16) on the inside, an electret filter (17) being arranged between the openwork structure (16) and the textile covering (14), and an upper supporting frame (15) for the carrier plate (10) of the dust bag (9) being provided. In order to achieve a design which is more favourable in terms of handling and also as regards improved hygiene, the invention proposes that the openwork structure (16) is removably connected to the supporting frame (15), that the electret filter (17) is fixedly attached to the openwork structure (16) or the supporting frame (15), and that the supporting frame (15) is connected with a catch connection to a holding frame (13) to which the textile covering (14) is fastened, an inward elastic deflection of portions of the supporting frame (15) being necessary to release the catch connection. <IMAGE>
