Abstract (en)
[origin: WO9520908A1] A connector for use with a tab style biomedical electrode is disclosed. The connector comprises pivotally mounted movable (21B) and fixed (20B) jaws and a spring (23) biasing the jaws toward a closed position. The connector is readily assembled, while retaininf a secure connection between the jaws. Preferred embodiments achieve a high tab release force and yet provides an acceptably low actuation force. Preferably, the fixed jaw includes smooth, continuous surface (28) which facilitates insertion of the tab between the jaws of the connector.
