Abstract (en)
[origin: WO9520576A1] A dihydropyridine compound of formula (I), wherein: (1) W represents a cyano or halo lower alkyl group; R<1> represents a lower alkyl group; R<2> and R<3>, which may be the same or different, each represents a lower alkyl group; A represents an alkylene group having 1 to 10 carbon atoms; Ar represents an indolyl group, an oxotetrahydronaphthyl group, or a hydroxyl-, cyano-, nitro- or acetyl substituted phenyl group, or (2) W represents a cyano or trifluoromethyl group, R<1>, R<2> and R<3> each represents a methyl group, A represents a tetramethylene group, and Ar represents a 2-tolyl or 2-chlorophenyl group, or (3) W represents a trifluoromethyl group, R<1> and R<3> each represents a methyl group, R<2> represents a methyl or ethyl group, A represents a hexamethylene group, and Ar represents a phenyl group, or (4) W represents a trifluoromethyl group, R<1> and R<2> each represents a methyl group, R<3> represents an isopropyl group, A represents a tetramethylene group, and Ar represents a phenyl group, or an acid addition salt thereof. The invention also provides the individual optical isomers of the compounds of formula (I). The invention further includes processes for the production of the above compounds, pharmaceutical compositions containing same and the use thereof.
