Abstract (en)
[origin: WO9520707A1] A rectangular insulating mat comprising a mineral fibre layer made from a single unit of mineral fibre material, wherein the mineral fibres are bonded together by a binder and in which mineral fibre layer the fibres are predominantly located in planes substantially perpendicular to the plane of the mat, said mat being more easily compressible in the longitudinal or transverse direction than in the transverse or longitudinal direction, respectively, which mat further comprises an air permeable covering which covers at least the predominant part of the two main surfaces of the mat and which is attached to the mat.
