Abstract (en)
[origin: WO9510782A1] The present invention concerns an energy distribution system with one or more energy suppliers and several energy consumers (3), where each consumer is assigned energy measuring equipment (2). The instantaneous value of each system-related energy measuring equipment can be read by a computer. Each consumer (3) is provided with a terminal (11) connected to the computer (5), at which consumer (3) can activate the computer (5) via the terminal to show the relevant consumption during a selected period of time or equivalent.
