Abstract (en)
[origin: EP0742035A2] The invention relates to a method of manufacturing a ski, particularly a cross-country ski, comprised of an essentially integral skin part forming the top (1) and sides (2) of the ski, and of a bottom (3). The method according to the invention is implemented so that the skin part (1, 2) of the ski is laminated by resin injection moulding so as to achieve a prefabricated skin component with an essentially finished outer surface, and the bottom laminate and plastic running surface (3) of the ski are then bonded separately to this prefabricated skin component. The invention is also related to a skin structure manufactured using this method.
