Abstract (en)
[origin: EP0742337A2] The sections (1,2) hinge between the vertical shut position and the horizontal open one, having guide rollers (7,8) on stub-shafts (9,10) at their side edges. Each joint fitting (3,4) between the sections comprise a link (11) on the section side edge, and whose free end hinges on the roller stub-shaft of the adjacent door-section. Each link can hinge on both sections, extending above or below the stub-shaft in the installed position, and can accommodate the stub-shaft in a mating recess, typically formed between the prongs of a fork, and which can be closed by a transverse locking member.
