Abstract (en)
[origin: EP0742341A1] The caps (5) for the recesses (4) can be arranged to slide on the uprights (1), to which they are permanently attached. Each cap can be U-shaped, fitted round the upright, with an elongated hole (9) in its web running in the lengthwise direction of the upright. A bolt (10) fixed to the latter above the recess works in the hole, its head preventing detachment of the cap. Grips (11,12) can be fixed to the top and bottom ends of the web, in which arrows (13,14) can be formed. The cap itself can be a plastics injection-moulding.
