Abstract (en)
[origin: WO9616609A1] A system for the introduction of a fluid to an internal volume of a suction canister (10). The canister is provided with sidewalls and a top, the latter possessing a circular opening and cylindrical duct. A fluid containing vessel (20) is provided having a tubular extending dispensing port (19) sized to pass over and capture the cylindrical duct when the fluid containing vessel is positioned over, and in contact with the suction canister (10). The fluid containing vessel further is provided with a fluid reservoir segregated from the tubular extending dispensing port by a circular membrane (18) which is scored so as to rupture by the cylindrical duct upon the application of nominal pressure exerted upon the fluid containing vessel.
