Abstract (en)

[origin: DE4401445C1] The direction elements (7) of the device have a tapering head area (8) and a foot area (9) with two parallel flat sides (11) joined by the cross sides (12) of the foot area. These cross sides are curved so that they contact the strings (2) being aligned practically spot like. The flat sides extend higher than the cross sides. The semi-elliptical or semi-circular head area changes seamlessly into the curved cross side which is set practically at right angles to the base plate (4) of the device. The direction elements can have retaining edges (13) adjoining their foot areas (9).
