Abstract (en)  
[origin: WO9520710A1] A telescopic end panel for a mobile panel wall comprises a vertically slidable pressure bar (2) at the top edge of the telescopic end panel, and a vertically slidable pressure bar (4) at the bottom edge of the telescopic end panel, a horizontally slidable shut-off construction (6) at one vertical edge of the telescopic end panel, and three rotatably mounted gear segments (8, 9 and 10) which through rotation can be brought into mesh with each other in such a way that when the telescopic end panel (1) is being closed the horizontally slidable shut-off construction (6) is moved outwards first, and then the vertically slidable pressure bars (2 and 4) are moved outwards, while when the telescopic end panel is being opened the pressure bars (2 and 4) are moved inwards first, and then the shut-off construction (6) is moved inwards.
