Abstract (en)

[origin: DE4402856A1] A first long-distance communications network (KN1) for the exchange of e-mail is connected up to a number of conversion stations (KON) which transmit incoming mail over a second long-distance communications network (KN2) to post office printing centres (P1 to P3) according to the postal address of the addressee. Mail is written on a PC using any text-processing programme and transmitted over an electronic post office system (KN1) to a conversion station (KON) where the format is converted into the postal data format and the target printing centre (P1 to P3) determined.
