Abstract (en)
[origin: EP0743026A1] The invention refers to a jewelry device, comprising two transparent coverplates (2, 3) arranged parallel with mutual distance and connected to each other by a connecting rim (4) wherein an object movable by external influence is provided between said cover plates. According to the invention the object (1) is secured parallel to the cover plates (2, 3) on a ball bearing axle (4) allowing movement of the object parallel to the cover plates (2, 3). The weight axis of the object (1) is arranged parallel with a certain distance to the fastening axle. <IMAGE>
