Abstract (en)

[origin: EP0743027A1] The packaging for application of a cosmetic product comprises a case (2) containing the product and a rotating product applicator (15). The product is transferred by a coating roller (8) able to rotate inside the case. The roller has a surface region (17) which contacts the applicator and exerts a contact pressure on it. It also has a surface region which comes into contact with the product contained in the case. Roller rotation transports a product charge between these regions to transfer it. The roller is fixed to a drive (12) accessible to the user outside the case.
