Abstract (en)
Flat textile structure comprising groups of parallel bundles (12) of reinforcing fibres that cross one another at a crossing angle (d). The structure contains fixation means for the bundles (1,2), which extend over part of the structure's surface, which fixation means (3) allow a change in the crossing angle (d) between the groups but prevent a change in the distance (x) between the bundles of a group in the structure's surface either completely or partially, relative to the change in distance in a corresponding structure that does not contain the fixation means. <IMAGE>
