Abstract (en)
[origin: DE19518042C1] The lock comprises a roller (4) with locking duct (42) which is held inside a hole in a housing (1). A key (5) which has a profiled bit (52) fits into the roller's locking duct. The free end of the bit has a lug (522) by which the tumblers (41) in the housing are brought into a position independent of their opening positions, after the bit has been retracted from the locking duct. When the bit has been completely surrounded by the locking duct, the lug grips behind the outermost tumbler (415) of the roller.
