Abstract (en)
[origin: EP0743664A2] The device has an actuation element e.g. a rocker (18), which returns to its initial position after actuation, and a slider (16) actuated by it with at least one pendulum device (20) suspended from it and a switching element (14) which works in conjunction with the slider and pendulum device and actuates at least one contact arrangement (24). A spring (22) is arranged on the slider on the deflection side of the associated pendulum. The spring, which returns the deflected pendulum to its initial position, is a flat spring which engages the pendulum by engaging an aperture (23) in the pendulum at the end remote from its pivot point.
