Abstract (en)  
[origin: DE4403753C1] The description relates to a contact block (10, 8) for contacting and contactless plastic cards with embedded IC (1) which provides additional protection for the embedded ICs and may also be used as a sensitive switching component for electronic purposes. In particular, the operation as a switching component can make it possible for the contactless functions of the card to be switched on or off by a card user for the purposes of remote transmission. In addition, the contact block can be exchanged and thus contact card functions are maintained even when the contacts are worn.
