Abstract (en)

[origin: EP0685182A1] The products (P,P') are put into cups (6,6') which are held in square cavities (2) in an intermediate plate (3). The cavities are defined by a flat base (4) and lateral walls (5) perpendicular to this. An elastomeric O-ring (18) is held around the lateral walls by notches (5f) at each corner. The O-ring holds the cup in the cavity elastically but allows it to be removed. The intermediate plate is held in the base (B) of the case by a tongue (8) which engages in a corresponding hole (8a) in the front of the base. <IMAGE>
