Abstract (en)
[origin: EP0744194A1] The upper surface of the ski is a layer of synthetic material (10) and its centre part is raised. The lateral edges of the ski (2,3) are lower than the thickness of the ski and form reinforcing bars. The lateral parts of the upper surface rest on the edges. A rigid platform (12) is an inverted U-shape, in cross-section, and its legs (14) rest on the edges. A notch (15), on each side of the upper layer, holds each leg and its length and width corresponds to the dimensions of the leg.
