Abstract (en)

An improved structure to mount a children's slide. It consists of two hollow modular parts (2) joined at one side to a third part (1) making up a truncated pyramid shaped structure closed at the top by a third part (10) which forms a raised platform having a non-slip surface, its front side communicating with a slide consisting of sections (19) and (20). Parts (13) are connected to part (10), forming handrails. The invention is applicable to make up demountable structures for children to play. <IMAGE>
