Abstract (en)

[origin: EP0744342A1] The clamping unit (3) has a pivot mounted clamping shoe (5) and a clamping wheel fixed to a pivoting rocker arm (6) when the clamping wheel is turned. The clamping wheel is driven by an electric or compressed air motor (12) coaxial with the clamping wheel and connected to the clamping wheel by a planetary (14-19) gear coaxial with the wheel. The clamping wheel has an inner cavity partly containing the clamping wheel in the form of a cylindrical ring with clogged inside. The motors torque is adjustable.
