Abstract (en)
[origin: EP0744553A2] A transmission component is connected to the drive part (7) and extends outwards through the longitudinal slot (14). In the area of the two slot flanks, a resistance strip (23,23'), fixed to the housing, extends in the longitudinal direction of the slot. A slide contact arrangement (32) is provided on the transmission component. The slide contact arrangement is simultaneously in contact with both resistance strips and slides along them during the longitudinal movement of the transmission component. Connecting devices (28) are available for connecting the two resistance strips with a position-ascertaining-evaluation device.
