Abstract (en)

[origin: EP0744854A1] The device for accommodating and retaining utensils, tools, instruments, and the like comprises a supporting element (1) that lies longitudinally and is provided, at its opposite ends, with heads (9, 15) that are adapted to be fixed to a back surface (8) that is parallel to the supporting element so as to form a pocket (14) that is open on opposite sides and in which the tools can be inserted. An elastic retention element (5) is adapted to be associated with the supporting element (1) and forms elastically flexible prongs (6a, 6b) that run longitudinally with respect to the supporting element and protrude transversely inside the pocket so as to retain the tools. <IMAGE>
