Abstract (en)

A lamp holder for a wall-mounted switch assembly comprises an insulating block (40) which can be fitted tightly in a predetermined direction between two insulating tenons (12,13) formed by the switch body, the block acting as a support for a lamp (43) and for rheophores for connecting the lamp (43) to facing contacts (50,51,52) on two opposite walls of the block (40) which are in contact with two facing walls (48,49) of the tenons (12,13) and, by penetrating slots (53,54,55) in the tenons, ensure the electrical connection of the lamp to electrical terminals of the switch. <IMAGE>
