Abstract (en)

[origin: EP0746064A1] The electrical connector strip has a housing 3 that is produced in an insulating material and set into this are a number of contact elements 7 that are in parallel and electrically separate. Each contact is produced in metal plate and has pins formed 15 that project from the base and fit into contact holes on a circuit board. One side of the contact elements are formed with channels 20 that allow bridging contact strips 25 to be inserted to establish an interconnection.
